

## DONCASTER EDUCATION CITY THE WATERFRONT, DONCASTER

A major addition to the existing facilities to provide a state of the art further education development complex on the bank of the River Don in the heart of Doncaster.

The project involves construction of two 5/6 storey blocks. The north and south blocks are interconnected by steel footbridge links and observation areas. The entrance areas of both buildings are distinguished by extensive roof overhangs supported by full length circular hollow section feature columns.

The contract involves the design, fabrication and erection of 3200 tonnes of structural steelwork, including cellular beams and trusses.

Also included is the supply and fixing of pre-cast concrete floors and stairs with associated progressive collapse works - plus metal decking to specified areas.

Client	:	Doncaster Further Education College
Main Contractor	:	HBG
Architect	:	DLA Architecture
Structural Engineer	:	Ove Arup
Steel Erected	:	3200 tonnes
